

AMENDMENTS TO THE CLAIMS

B1
1. (Currently Amended) An information terminal comprising:
an information history list display section for displaying communication history ~~information of communication~~ in connection with a ~~processing~~ answering state of the ~~history information in accordance with~~ respective communications based on history related information ~~indicating~~ which is generated by outgoing or incoming communication and indicates the ~~processing answering~~ state of the ~~history information~~ respective communications.

2. (Currently Amendment) The information terminal according to claim 1, further comprising:
a history management section for recording the communication history ~~information about communication~~; and
an information management table for recording the history related information that indicates the ~~processing~~ answering state of the ~~history information~~ respective communications stored in said history management section.

3. (Currently Amended) The information terminal according to claim 2, wherein
said information management table records relationships between the ~~history information~~ respective communications stored

B1
in said history management section as the history related information; and

said information history list display section displays the ~~history information~~ respective communications in connection with ~~the history information about that history information in accordance with~~ communication which corresponds to the respective communications based on the history related information stored in said information management table.

4. (Currently Amended) The information terminal according to claim 2, wherein said information history list ~~display section~~ displays together the ~~history information about communication~~ respective communications sent by a plurality of different communication means ~~together~~.

5. (Currently Amended) The information terminal according to claim 2, further comprising:

a personal address book for recording a personal name of a communication party and a communication address of the communication party; and

an address book search section for searching said personal address book, wherein

said information history list display section displays the personal name in substitution for the communication address

b1 included in the ~~history information~~ respective communications stored in said history management section ~~in accordance with~~ based on a retrieval result from said personal address book by said address book search section.

6. (Currently Amended) The information terminal according to claim 1, wherein ~~said information history list display section~~ receives the communication history ~~information~~ and the history related information ~~from~~ are stored in a server, ~~and displays the received history information in connection with the processing state of the history information in accordance with the received history related~~ to be sent to the information terminal.

7. (Currently Amended) The information terminal according to claim 1, further comprising:

a history management section for recording the communication history ~~information about communication,~~

wherein ~~said information history list display section~~ receives the history related information ~~indicating the processing state of the history information from~~ is stored in a server, ~~and displays the history information in connection with the processing state of the history information in accordance with the received history related~~ to be sent to the information terminal.

B1
8. (Currently Amended) The information terminal according to claim 1, further comprising:

an information management table for recording the history related information ~~that indicates the processing state of the history information about communication stored in a server, and~~

wherein said ~~information~~ communication history list display section ~~receives the history information about communication from said is stored in a server, and displays the received history information in connection with the processing state of the history information in accordance with the history related information stored in said~~ to be sent to the information management table terminal.

9. (Currently Amended) A server comprising:

a personal information management section for transmitting, in response to a request from an information terminal that displays ~~history information about communication~~ respective communications which belong to each of the information terminal users, and in connection with ~~a processing~~ an answering state of the ~~history information~~ respective communications based on history related information which is generated by outgoing or incoming communication, requested information to said information terminal.

B1
10. (Currently Amended) The server according to claim 9, further comprising:

a history management section for recording ~~the~~ communication history ~~information about communication~~; and

an information management table for recording history related information ~~that~~ which indicates ~~a processing the~~ answering state of the ~~history information~~ respective communications stored in said history management section,

~~wherein said personal information management section transmits the history information stored in said history management section and the history related information stored in said information management table to said information terminal in response to a request from the information terminal.~~

11. (Currently Amended) The server according to claim 9, further comprising:

an information management table for recording history related information indicating ~~a processing the~~ answering state of the ~~history information about communication~~ respective communications,

wherein said ~~personal information management section~~ server transmits the history related information stored in said information management table to said information terminal ~~in~~

b1
~~response to a request from the information terminal.~~

12. (Currently Amended) The server according to claim 9, further comprising:

a history management section for recording communication history ~~information about communication,~~

wherein said ~~personal information management section~~ server transmits the communication history ~~information~~ stored in said history management section to said information terminal ~~in response to a request from the information terminal.~~

13. (Currently Amended) An information display system including an information terminal and a server capable of communicating with each other, said information display system comprising:

a history management section for recording communication history ~~information about communication;~~

an information management table for recording history related information ~~that~~ which is generated by outgoing or incoming communication and indicates a processing an answering state of the history information respective communications stored in said history management section; and

an information history list display section for displaying the ~~history information~~ respective communications in connection with the ~~processing~~ answering state of the ~~history information in~~

B1
~~accordance with~~ respective communications based on the history related information stored in said information management table.

14. (Currently Amended) The information display system according to claim 13, wherein said server ~~comprises~~ includes said history management section ~~and,~~ said information management table, ~~along with~~ and a personal information management section ~~for transmitting to transmit~~ the communication history information stored in said history management section and the history related information ~~stored in said information management table to said~~ which belong to each of the information terminal, ~~wherein said users to the~~ information terminal ~~comprises said information history list display section, and wherein said,~~ and wherein said information terminal includes the information history list display section, and receives the communication history information and history related information ~~transmitted from said personal information management section.~~

15. (Currently Amended) The information display system according to claim 13, wherein said server ~~comprises~~ includes said information management table, ~~along with~~ and a personal information management section ~~for transmitting to transmit~~ the history related information ~~stored in said information management table~~ which belong to each of the information terminal users, to

B1
said information terminal, and wherein said information terminal ~~comprises~~ includes said history management section and said information history list display section, and ~~wherein said information history list display section~~ receives the history related information ~~transmitted from said personal information management section.~~

16. (Currently Amended) The information display system according to claim 13, wherein said server ~~comprises~~ includes said history management section, ~~along with~~ and a personal information management section ~~for transmitting to transmit the communication history information stored in said history management section to said which belong to each of the information terminal, wherein said users, to the information terminal comprises, and wherein information terminal includes~~ said information management table and said information history list display section, and ~~wherein said information history list display section~~ receives the communication history information transmitted from said personal information management section.

17. (Currently Amended) An information display method comprising the steps of:

recording communication history ~~information about~~
~~communication of~~ respective communications;

B1 recording history related information ~~indicating a~~
~~processing~~ which is generated by outgoing or incoming
communication and indicates an answering state of the history
information respective communications; and

displaying the ~~history information~~ respective communications
in connection with the ~~processing~~ answering state of the ~~history~~
~~information in accordance with~~ respective communications based on
the history related information.

B2 18. (New) An apparatus for processing communication history
information, comprising:

at least one information processor for maintaining a record
of communication history information indicating a processing
state of each item wherein said communication history information
being generated from a plurality of different types of
communication;

a display for displaying said communication history
information.

19. (New) The apparatus of claim 18, wherein said at least
one information processor including an operating menu for
generating, in response to a user selection, a reply to an item
of communication history information wherein completion of said
reply generating an update to processing state of said item.
